Mike,

See below re Mike Byrd's assignment for the rewrite of API RP53 for BOP's. As Mike now is in your team I assume you should be involved in his workload.

I am not sure how we ( BP) decided at what function and what person should represent us on this critical role but Mike certainly has some of the best of the limited experience in BOP's in BP.

I am aware of other groups involved with this inc the investigation group led by Fereidoun Abbassian and John Baxter has an interest in this area .

Folks

FYI - Guess you already know of this work and that Mike Byrd is representing BP.

Cheers

Ross

**Subject:** API RP 53 Revision

This note is to announce the formation of a task group to revise and update API RP 53, Blowout Prevention Equipment Systems for Drilling Operations. Frank Gallander of Chevron will chair the task group and is soliciting additional members for this effort. I have attached a spreadsheet developed by Frank with tabs that contains the following:

HIGHLY CONFIDENTIAL

BP-HZN-BLY00110239

- a list of persons that have agreed to participate so far;
- a breakdown of the document's sections with some recommendations for changes as a starting point for discussion topics;
- the recommendations from the BOP JIP study for the BOEMRE (MMS);
- pre-selected section assignments to expedite the revision activity;
- recommended procedures that should be readily available at the rig site.

Please contact me if you have not already contacted Frank and are interested in participating on this group. I will be sending a notification of a kickoff meeting in the near future once the date and location are confirmed.

Best regards,

Roland Goodman
