**Subject:** RE: Subsea Mancondo Worklist  
**Importance:** Normal

Thanks RJ. Will discuss this in the office with John and Paul pending the updated schedule. We do have to change out the connector before we go to do Nile P&A to DWHC which is tentatively the next operation after Macondo. So the guys will have extra work for that.

My initial thoughts are to do the normal stack maintenance before Macondo so it does not get lumped into the connector changeout. However, Paul should be able to get us a better read on resources and workflows for this work. You can also ask the guys how that might affect their workload.

Will get back to you on this.

Best Regards,  
Brett

All, this is Transocean worklist proposal for next rig move. Lets look at it and decide which way BP wants to go.

R.J.

Attached are the plans for the Subsea work during the rig move. One of the worksheets is for the move completing all the normal tasks. (i.e. Changing rubber goods) The other work sheet is with these items removed. Please let me know which of the 2 plans B.P would like to accomplish.
