Importance: Normal

No problem contacting Dave, I saw his note. We really do need to test the deeper amplitude. I have spoken to Pat about drilling on in 6" if we need to. If we can stabilize with some LCM we should be able to drill ahead.

James,

Thanks for this.

FYI - AGI asked for a one pager on McCondo - given you were travelling I went directly to Dave Rainey. He said he was pulling something together for Mike Daly and would send it to me too. Just wanted to keep you in the loop.

Just a heads up for Andy, Doug has already landed the Chief Engineer role (subsurface and surface) at BHP. Big salary bump, he's very happy.

Personnel Announcement –
Doug Handyside

Message from James dupree

Following a career spanning 32 years, the last 25 with BP, **Doug Handyside** has elected to retire in June of this year.

Doug began his BP career in 1985 as a Reservoir Engineer with Sohio Petroleum in Dallas and subsequently worked assignments and projects in Alaska, Houston and Colombia. Doug transferred from EPT to the GoM in 1996 as a subsurface team lead for BP's Joint Venture projects, leading BP's subsurface efforts in support of sanction, development and start-up of the Mars, Ursa, Europa, MC764, Crosby and Princess fields. He served as a GoM Performance Unit Leader for both Joint Ventures and Nakika before moving into a functional leadership role as GoM Reservoir and Wells Manager in 2004. In 2006, Doug became the Holstein Development Manager and, in 2008, was appointed as the Holstein Asset Manager.

Please join me in wishing Doug, his wife Brenda, and their family all the best for the future.

James
