Subject: RE: Marianas Priorities after Dorado
Importance: Normal

We probably should have this as a fall back in the event something happens at H-2 that is a big surprise.

Andy, thanks for the update. Do you still think we should have the Macondo well ready to go for a 2Q start date in case the farm out falls through?
Thanks, Ian.

Subject: Marianas Priorities after Dorado
Importance: High

Kevin Lacy has confirmed with Neil Shaw that the priority for the Marianas is the Nakika H-2 well and all efforts should be placed on delivering the plans for this well upon completion of the Dorado SS#4. I believe the asset is looking at a start date of April 1, however we should do everything possible to target a March 15 start-up date. The SPU priorities are Nakika H-2, Possible farm out before and during hurricane season, possible stack during hurricane season and then the Macondo well after hurricane season until the end of the contract.
If you have any questions, please let me know,
Andy
