I would like to be able to pump 4 bpm downhole without the riser pump. Can you find out where we exceed 14.5 ppg ECD?

Brian I can model with the mud parameters the you are seeing now, which I have just set up, but when you come out and go back in you will have been static for roughly 24 hours and you have drill pipe in the hole now and you will have casing so you will not see the ecds you are seeing now. They will be higher than you are seeing now due to

M-I 00079985

the od of casing and not DP. On the initial model I just ran I am seeing 14.41 at 42 gpm, I ran model a couple days before and I left the riser pump on. When I take the riser pump off well we drop from 14.43, as I modeled earlier, to 14.41.
