Ok. We discussed the issue of getting the KWIK SEAL and it availability and that MI SEAL is easier to get. I have discussed and Lebleu has agreed for us to use the MI SEAL instead of the KWICK SEAL which should help us with lead time. Keep me posted on the Form-a-squeeze. We will be drilling a critical section the next few days so I hope we get some in shortly. I have enough FAS to pump 200 bbls so I will touch base with warehouse and follow up on FAS. Thanks for your help.

Doyle

We keep everything except the MI Seal and the Squeeze right now; The squeeze is being addressed and I am sure it will be there at all times and I do not see a problem keeping some of the MI Seal;

Ron,

After some brainstorming, we feel we have come up with requirements for LCM. As I discussed a couple weeks ago, I, ie BP would like to see this material available to ship immediately in the event we experience catastrophic losses. We would pull for our regular orders from this and then the warehouse could order to replenish what we pull to keep the total material available. We will keep the FAS AK material on the rig. Please share your thoughts on this matter and if this is not acceptable, please let me know what would be an acceptable compromise.
