Importance: Normal

Jay, we are going to request that Transocean put in place a safety intervention plan for all of our rigs. I am sure that as part of that process Transocean with BP support will be conducting a safety pulse check on all Transocean rigs. I would not initiate a separate process at this time.  
Any questions let's discuss.  
Thanks, Ian.

Gents,  
Thoughts on Pulse Check team, process and timing for the Horizon.....  
Jay

Subject: GoM SPU Safety Pulse Check Process

#### GoM SPU Safety Pulse Check Process

The GoM SPU Safety Pulse Check process is now ready for implementation within your operating entity per the Safety Improvement Plan. The pulse check process will be conducted on all offshore assets, rigs, marine installation vessels, and at the PMF facility.

As we've discussed previously, the critical first step is choosing the right team members to conduct the engagement sessions. Striking the right balance between leaders who the workforce knows and trusts and leaders who have recently joined the asset/SPU is key; I ask that you give selection of the Pulse check teams your immediate attention.

BP-HZN-2179MDL00181518

We've committed to complete the Pulse Check by the end of March with action plans developed by April 15. Everything you need to get started is included in the attached pack. Please engage your HSE Advisors to participate in the Pulse Check and assist you with preparing the summary report and action plan.

Finally, I've asked Curtis Jackson and the HSSE team to develop an SPU level summary to assure rapid sharing and learning as we go forward, therefore, please forward each of your Pulse Check reports to Curtis once completed.
