Subject: Updated Procedure

Attached is the updated procedure based on our current plan forward. If anything changes I will update and send the next revision out. We are still waiting for approval of the departure to set our surface plug 3000' BML. If we do not get this approved, the displacement/plug will be completed shallower after running the LDS (basic details of this change are included in this procedure). Please let me know if you have any questions or suggestions.

A detailed cement procedure should be available from Jesse sometime tomorrow.

Thank You,
Brian Morel
