### Halliburton Advantage

Halliburton helps you safely reduce the cost of producing a barrel of energy by bringing new efficiencies to your deepwater projects.

In the last few years, we've invested millions of dollars around the world in new manufacturing facilities and techniques to improve the reliability and availability of our equipment.

Each year, we also increase the amount we spend on R&D to improve the efficiency of the tools and techniques we offer clients. For instance, we're spending 20 percent more than in last year.

We're building a new technology center in Brazil that will become our deepwater center of excellence. People at this center will work on developing new deepwater solutions for clients worldwide. The center will also help train our best and brightest people for deepwater assignments around the globe.

Halliburton has a proven deepwater track record. We have participated in the world's most remote locations to the largest global deepwater projects. Whether you need a single tool, a partner to manage entire projects, or a trusted advisor to recommend the best solution for your job, Halliburton delivers.
