Thanks Kevin.

With regard to other. "small" TO incidents and speaking for myself, I am concerned that TO's small incidents are building to something BIG per the classical "safety incidents triangle". I know you are on them. I hope they are feeling a great sense of urgency. Unfortunately, as all of us know in the safety space. "small things do become big things." The lack of hazard/risk recognition in some of these recent, smaller incidents is shocking to me.

Here is the notice that went out - my apologies that you were not on the initial distribution.

Will check into the list.

Subject: HiPo Incident GoM Transocean Marianas

Attached is an HiPo incident notification arising from a collision between the traveling block and the crown of the Transocean Marianas.

No injuries occurred but significant damage resulted. Further details will be await the investigation report.

If you have questions or desire further information contact myself or Paul Sullivan the BP senior representative on the investigation team.
