John says probability of a top kill tonight is miniscule. Meeting didn't rule it out, but they have other priorities to get ready for next step.

A top kill opt'on tonight is not a given. John Hughes w/ BP is going into a 4-30pm meeting in which this decision will be made. Stand by, Carter.

Keep this up and we'll have to change the name to Cameron Manifold Systems.

Agree totally. They have no clue what to do next, simply running around like chickens with their heads cut-off.

Good summary and analysis. Let's face it, they are running this show like a game of scrabble. I suggest you go home. By morning they will have enough letters to attempt a new word.

They (Jason Frazier who works for Merrick Kelly) are pressing hard to find a way to move Carter et al without pulling the pod. They are paranoid about pulling the pod. We spoke again to Carter about spooling off the mux and hot line and not moving on the new vessel. Carter didn't like that idea and neither does TO's Mike Fry or me. We left it by asking what would be done and what the risks would be as well as brainstorming for transferring the cable's weight from the existing tugger. The tugger cable, mux cable making this transfer to another vessel in this way highly problematic. Jason, this will be an earlier phone call.

That BP's Bruce Flanders, who approached us earlier on the same topic, is under the "go". The two BP guys didn't even know each other or that the other was working on this. Once again, the right hand doesn't know what the left hand is doing. We need to not knee jerk on any of this.

Looks like a top kill tonight is a no go.
