Rob,
I'll try and come over near lunchtime, if possible.

I'll try and take the opportunity to update on where we might be with what needs to be done for Bleeding Choke , valves etc. on DD li BOP and Capping Stack since Mr. Wellings has already been quizzing me on that work.

Regards,
Iain Sneddon

Ian,
I have received some large files from Hydril on the DDII. If you are not pinned to your chair I would appreciate your coming over to Park 10 at your convenience to view what we have and see if this could be used by WWC.

Thanks

Rob

Thanks,

One other question that I've been asked: Do you have any details on BOP/LMRP Total Weight and location of Centre of Gravity for the assembly?

Iain

Importance: High

Rob,

Any info on the DD II BOP frame yet? Needing to push info to WWC to get their designer working.

Rob,
Do you drawings from Hydril showing the DD II BOP Frame Details on the right hand side of the DDII BOP on DWH Drawing?

Failing that can we get someone of the rig to take photos and measurements of the DD II Frame side that faces the Moonpool when the BOP is moved on to the transporter?

This would be the side (in my opinion) that it would make sense to attach the frame that they are designing.

I don't have any drawings yet from WWC that I can send to give you some idea of what they & BP are thinking of.

Thanks and appreciation for anything that you can do to help. If you need me to come across to Park 10 to further explain then please ask.....

Best Regards,

Iain Sneddon

Thanks for the drawings Iain, this was extremely helpful so far. As I am sure you are aware I require one more view of the capping stack. We will fix our guide frame to the stacking cap so I need some info on the structural frame to design my attachment points.

Thanks in advance,

Shawn

Joe Dean,

Drawing already supplied from Transocean Draughtsman. "Marianas Connector is what will be fitted.
