Pat

Unbelievable. If they would only listen we could stop the flow. It is a nightmare to see the oil gushing out.

Regards

I agree. BP asked me to attend the meeting so I did it.

On this well, with the amount of unknown variables, I have to agree the risks of using the lead spheres would appear to outweigh the benefits. If we make matters worse we may never be able to recover. If the decision were mine I would cap the well with the ability to choke the flow and continue to produce to a suitable vessel.

If you look at this, don't make fun of me. If you think I am off base with this response – let me know. It's too late, I already sent it, but I will feel better if I know.

---PRIVATE & CONFIDENTIAL---

David: I need for you to pass this to: Mark Mazzella and Jerry Shursen. I would also like to get their email addresses I have sent this to David Barnett since it would potentially impact his Relief Well projects from DD II and DD III. We can let Mark distribute to the other folks who were there, if that is what he wants to do.

Take a look and give a call to discuss further.
