

Permeability

- From core
 - Between 65 and 750 mD
 - Arithmetic average: 474 mD
 - Geometric average: 364 mD
 - More samples with permeability of greater than 500 mD than less than 500 mD

From Post-Drill Technical Memorandum

If the assumption is made that one sample describes one inch of rock, the core plus represent approximately 2% of the M56D unit and 1.4% of the M56E in terms of amount of interval covered.
