Importance: Normal

Maria, Steve

Thanks...

Let's talk... this is why Tim is working the same question...

Regards
Trevor

Steve can give you more details. We were trying to get an idea of what restriction size could create the dP currently seen across the different rams, etc.

Maria

Good morning...

May I ask who has initiated this work on dP across BOP stack please? I have information on measured BOP stack dPs and also have Tim Lockett modelling the BOP in more detail...

I am back in Houston and happy to discuss.

Regards

Trevor

Rob,

Do you have any information on Macondo about the actual reservoir pressure and maybe the PI?
We are trying to model the dP across the BOP stack and I need information on the MC-252 reservoir and BH conditions even if they are just a rough approximation.
Maria
