<<...>>

Kurt,

You must have seen the data and the plot from Matt.

Both of you, please refer to the our latest calculation of the SIWHP pressure which including the ramping down time (about 3 hours). The pressure on our plot is the PT-B on Matt's plot.

Our interpretation is that we are in good place.

The pressure build up between Matt's emails make sense to us too!

Cheers,

Tony T. Liao, Ph.D.
