Subject: RE: Quote for Rush CCE Testing

Edmond,
We would like to conduct more tests with the sample you have at 18142'. Please send the invoice to me if needed to kick off the work. Contact me or Yun if you have any questions.

1. Single-stage flash to determine phase compositions, zero-flash GOR, API, STO MW and gas gravity.
2. Multi-stage separator test to determine evolved gas compositions, residual liquid composition, liquid densities, gas gravities, separator GOR, FVF, STO API and MW.

The separator test conditions already used are: HP 1,250 psia and 130F
IP 450 psia and 120F
LP 150 psia and 120F

ST conditions at 15.025 psia and 60F.

Thanks,
Kelly and Yun

Yun,

Please find attached the results from the first CCE test with the mixer on. The density data above the saturation pressure cannot be provided as we do not have the GOR data. The test has been video recorded. Tomorrow we are going to repeat the test without using the mixer.

Regards,

Edmond
