Importance: Normal

The plan is long term containment and burning oil/gas with a test spread on the Q4000 and the Enterprise flowing oil/gas to her system via a top hat. When the FPSO/Tanker is ready, I guess it will take over from the Q4000. No plans to put a bop on bop or capping stack. I have the 3 ram stack ready if you need it.

Jim,

Do you know if the plan is to go with the 3 Ram Capping stack or will there be some variation of it? Just trying to stay linked in with you on this.

Thanks,

John
