 Importance: Normal
 Attachments: Top Presenter Peer Asses Recommendations Final.pdf

Jon et al
 Attached is the final feedback from the Peer Asses on Top Presenter. This covers both the BOP on BOP and the Run/Hub on Hub Files. 2010
 Since the review was completed the Stock on Stock option has been accepted as the preferred option with the Run on Hub from as a contingency option in the event the LMSF cannot be recovered in the event it is the (lock) point in the wall. The full value information should not be progressed further.
 There is much to be done for the BOP on BOP to be implemented with confidence and the move to get additional resource into your team to assist is important to maximise the probability of this operation being successful.
 The work done by your team in describing the procedures and the risks greatly helped the review team focus on the important issues so thanks again for that.
