Subject: Conference call this AM to discuss DD2 BOP venting
Gentlemen

Can we get around the squat box for a telephone conference this am at 11, to discuss the venting of the stack solutions.

I am sure this issue is being worked within BP (Iain comments?), so we need to think about it and have an opinion or even better a solution

Nice if you can be available.

Can we get around the squat box for a telephone conference this am at 11, to discuss the venting of the stack solutions.

I am sure this issue is being worked within BP (Iain comments?), so we need to think about it and have an opinion or even better a solution

Nice if you can be available.

Agenda

- Overview of why BP may need this venting option
- Discuss Transocean Concerns
- Possible solutions to the challenge
 - Fail safe – ss choke on a pipe ram outlet
 - Vent through a surface test system
 - Choke manifold on the seabed with coflex jumper from the stack to the manifold
 - Etc.
