

Elements of Dr. Clapp's Opinion

- **Eleven people were killed and many others were injured in the explosion and fire that occurred on the DWH oil rig on April 20, 2010;**
- **Thousands of injuries and illnesses were documented amongst cleanup workers and volunteers during the response to the DWH oil spill;**
- **Ongoing work is being conducted to determine the long-term impact of the oil spill on human health and it is premature to draw conclusions about the long-term impacts at this time;**
- **Dr. Cox's opinions and conclusions do not alter my opinion that the Deepwater Horizon explosion, oil spill, and response had a short-term impact on human health and may have a long-term impact on human health.**
