

SUMMARY OF CONCLUSIONS: KEY FINDINGS

- **Extensive toxicological exposure**
 - Unprecedented exposure of dispersed oil at depth
 - 3 months of exposure
 - PAH levels especially toxic in: deep sea, surface water, and sediments

- **Potential toxicological effects resulted from exposures in the low parts per billion (ppb)**
 - Demonstrated by decades of oil spill toxicological research
 - Demonstrated by DWH-related research

- **Dr. Shea's analysis ignores current science and hides harm**
