

SUMMARY OF REBUTTAL TO SHEA: COMPARING METHODS AND FINDINGS

Both approaches:

- 👁 Examined the water chemistries (18,000 analyses)
- 👁 Understand PAH composition & concentration are important

Underlying difference in BP's approach:

- 👁 Reject current science and DWH-specific literature
- 👁 Mischaracterizes methodologies
- 👁 Inappropriate use of the "Toxic Unit" (TU) approach
- 👁 Dilutes toxic water results via summarizing statistics
