

## In Situ Burning Removes Oil From the Environment

### RRT VI In-Situ Burn Plan

“In-situ burning alters the composition of the spilled oil by **eliminating anywhere from 90% to 99%** of the original volume of oil contained in a fire resistant boom.”

### National Response Team, Science & Technology Committee

“**Burning rapidly removes oil from the environment**, particularly when compared to shoreline cleanup activities that may take months or even years to complete.”

### U.S. Coast Guard In-Situ Burn Operations Manual

“ISB and any other at-sea oil removal process **will greatly reduce the ecological effect of oil impact on the shoreline**, which is a more sensitive marine ecosystem.”
