

**ZOOLOGICAL PATHOLOGY PROGRAM  
STRANDED CETACEAN NECROPSY REPORT**

**Field ID:** ECWR040711-11  
**Additional Identifier:**  
**ZPP Accession Number:** 12-08Sf  
**Species:** *Stenella frontalis*  
**Strand Date:** 04/07/2011  
**Strand Location:** Navarre Beach, Florida  
**Sex:** F  
**Age Class:** Adult  
**Necropsy Date:** 04/08/2011  
**Condition code:** 2  
**Total Length:** 207 cm  
**Weight:**  
**Blubber Depth:** 1 cm dorsal  
**Body Condition:**

ADDENDUM REPORT

**Slides/Tissues Received:** 3 additional slides

**Microscopic Findings:**

Slide 1a

Uterus: The endometrial stroma is thickened by very pale eosinophilic material that widely separates glands. Surface epithelium is absent. The stroma contains a few scattered lymphocytes and plasma cells.

Slide 2a

Cervix: No significant findings (NSF).

Slide 3a:

Uterine serosa: NSF

**Final Diagnoses:**

No additional diagnoses.

**Comment:**

The morphologic changes in the uterus are consistent with early post-partum involution. This finding corresponds to the changes noted grossly and the histologic findings in the ovary.
