Importance: Normal

Thanks Marty,
I'll admit I feel a lot more comfortable with the latest LOT even though it took forEVER. At least the trend looks right if you squeeze it down to a manageable scale and then throw a healthy filter on the data.
Pesky repeatability.
Have a good weekend. I don't anticipate messing with stuff again until Sunday in the evening.

Kate,

We just finished up a mini-peer assist trying to understand the latest LOT(?) and how to proceed. Consensus as you might have heard already is that we will squeeze the shoe. We intend to use a with stress cage mix in a cement slurry to try to (1) patch any channel that might exist, and 2) strengthen any exposed sand that we have damaged with our testing. Hopefully we can improve our lot (pun).

It was interesting to hear the debate on the LOT shape - I'm not sure anyone had exactly the same interpretation. In the end, I think most everyone thought squeezing was a good idea.

I'll be in Corpus over the weekend. Will have my PC with me in case the team might need anything from my end.

Marty

Can I see what Mark Alberty had to say about the Macondo LOTs? Because I'm still having heartburn over no buildup pressure.

Cordially,
Kate Paine
