FYI

Based on a few observations and questions of late, I asked Ron Livesay to review most recent BOP test data.

Attached are April 4 test interpretations. Suggests a time savings of > 7 hours.

April 11 test interpretations forthcoming.

Tim,

In the Word document is a quick review of the time savings for the 04 April test series. Savings are substantial.

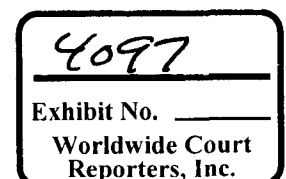

Also attached are the rig reports of the testing activities; more inclusive than MMS reports. Remember, only Official Tests are reported in MMS reports. Further, as is the case for the subsea BOP tests, only the last Official Tests are included in MMS reports. Thus, for the subsea BOP tests, it was the second Test #3 and Test #7 that would be included in the MMS report; there would be no mention of the first two.

A different report will soon follow on the 11 April testing.

Ron

Do you guys still have access to monitor Deepwater Horizon Digital BOP testing?
Was just curious -- if you did or have been -- just wondering if time savings have been
