Importance: Normal

Agreed.

Will give a you call tomorrow to give you some feedback on our recent trip to Confidence. If you are in WC then just call me at your convenience on my cell. I am on vacation for a day or so before heading out to the Marianas for a few days.

Thanks
KD

George, thanks for working through this issue.

All, let's ensure that we do not have to go through this again if we can avoid it. We need to get the consistent message to our WSL's that they need to renew their well control certificates within the 2 years, excluding the 90 day grace period.

Thanks, ian

Just to get everyone on the same page. Ian and Steve have given their verbal approval for the BP dispensation, it is being worked through the online system for George, Jake, Ian and Steve's approval to formally document.

4075

Exhibit No. _____
Worldwide Court
Reporters, Inc.

Susan, Joe and I met this afternoon and agreed that we are covered on the rig for all MMS requirements.
Thanks to everyone for their assistance in working this issue the last couple of days.
RJ will complete his hitch through 14-February and schedule his well control training promptly.
Call me if you have any further questions.

Regards,
George E. Gray

Subject: WSL expiring Well Control Certificate

Susan et al,

We (the Drilling Ops Team) need to work a dispensation to our BP Drilling and Well Operations Policy regarding RJ Doucet's expiring Well Control Certificate. I have pasted the applicable section of policy below in this note, it is item 15.3.

The dispensation will require Ian Little's approval (I have his verbal) and Steve Garner's as the line Manager. (Steve I'm bcc'ing you now to give you a heads up).

I will come into the office late this morning to discuss with you the potential need for at least a courtesy notification to the MMS.

Bob or John,

Can you help put this together on line? Today??

I'm thinking myself, Jake, Ian and Steve should be the people who "sign off" on this.

Description

RJ Doucet holds a valid IADC WellCap Supervisor Subsea well control certificate that expires 4-Feb, he is currently on the rig working nights. Per the IADC WellCap program there is a 90 day grace period after expiration that the certificate is still valid. We would like to let RJ complete his hitch through 14-Feb. Until 7-Feb we will have Dave Standhope on the rig and then Murry Sepulvado will relieve him, both have valid certifications. In addition all DODI personnel from the Driller up hold valid supervisor well control certificates.

Looking at the risks of a well control incident, it is very low as our upcoming operations are VSP seismic log, conventional logging and P&A'ing this current wellbore. There is a possibility of a geologic sidetrack.

Both our DWOP and Subpart O training plan state 2 years for renewal of well control certification they do not mention the 90 day grace period allowed by IADC WellCap.

With the above in mind we are seeking dispensation to item 15.3 of DWOP.

Well Control Training
15.1

All BP drilling and well operations personnel, and personnel acting on behalf of BP, who are directly involved in the planning and execution of BP drilling and well operations covered by this policy document shall have a valid and

recognised well control certificate.

15.2

All drilling and well operations contractor toolpushers, subsea engineers, drillers, assistant drillers and others who may take control of the well activities, involved in BP operations covered by this policy document, shall have a valid and recognised well control certificate.

15.3

Well control certificates shall be renewed at periods not exceeding 24 months.

Regards,

George E. Gray
