Subject: RE: Trip Out tomorrow
Importance: Normal

Speaking to Chuck just now, if all is right with the world before the BOP tests, then after testing, Devon will trip in to continue drilling. If things get silly for the sake of expediency, I will bug them more.

regards

Subject: Trip Out tomorrow

RJ,

I am sure the team will look at a very solid plan but, wanted to put my two cents in.

When the time comes to trip out for BOP test or losses that cannot be managed it would be prudent to spot LCM across open hole up into the salt while pumping ourselves out of the hole. Recommend we flow check the well for a minimum of 1 hour before starting out and again at the casing shoe. We have learned here lately with the deep gas well and Tiber well being drilled by the Horizon that it takes a while for those tight formations to feed in. We will be off bottom for quite sometime for BOP test and possible BHA change out.

Let me know if you other ideas on this subject. Get some rest before you go home!

Best Regards,

Keith Daigle
