Cory,

Is Carter or Charlie handling Transocean?

Subject: RE: Recertify BOP equipment

Pete, John,
Do you know if somebody from Cameron Houston met with Transocean to discuss this issue ? We may have opportunities for an exchange program as TO Egypt have some old Cameron BOP's which may need to be replaced.

Thanks and regards

Xavier

Not sure of the best way of making the push on this with Transocean but I believe it needs to start from the top down and needs the Houston Sales force to make the EB902D presentation.

See the email below from TO which is very interesting.

Somehow we need to get the statement in the email confirmed from TO corporate.

I removed some of the email trail- but it shows TO are not clear on what they should or need to do.

Regards
John Wilson

Xavier,

We have been tracking down what the Transocean policy is and found that most of these rigs are Non-Classed meaning inspect and local field support makes the call from the findings.

Not a clean way of doing business and our Well Control manual states we follow RP 53 every 3-5 years. In my opinion this is a gray area in our system until a company like BP ask for the inspection reports.

Regards, Richard

Tamer,

Forgot to ask you, have you identified a list of the Cameron BOP's you would like to recertify in the close future ?

Thanks and regards

Xavier

Dear Tamer,

In order to be recertified, the BOP need to be sent to a Cameron workshop. A full inspection has to be performed including cavity measurements, internal parts inspection, hardness checks, seals inspection and replacement, pressure test etc...

The only job we can do on site is a SCI (Strip Clean Inspect) which is not a BOP recertification.

Would you have a list of your Cameron BOP's together with recertification schedules so that we can work together on a recertification plan ?

Thanks and regards

Objet : RE: Advice

Hi Xavier,

I meant that the certification is about to expire, should it go to a licensed workshop and have a new certification?
Or as long as the measurements are within the OEM allowable limits, the unit can work until the measurements are under the OEM allowable limits.
Please advice

Thanks & Regards
