**Attachments:**

I have been asked the question from DM3 and Sevan about when to change out the rechargeable batteries. This was well before the April 20 incident. I just want to make sure we don't start saying something before we have made the best decision on what to do with the rechargeable batteries. I hate to say this but the April 20 incident helped speed up our discussions with Saft. I realize this is a touchy topic but we are trying to do the our best and it does seem to be dragging out.

Ray,

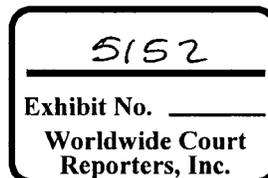

What does anything below have to do with testing of the AMF. Also keep in mind that the number 1 topic in the industry right now is AMF testing due to the Horizon incident. So no one has to say anything to the customer about testing, they are all coming to us. He didn't ask about changing batteries, he asked about testing the AMF sub sea.

Jason

Where did this come from? I didn't say anything about letting a customer know anything about any possible testing. We are still in discussions with Saft and nothing has been decided of what to tell our customers. We need to keep this whole subject to ourselves until Engineering has decided on the best solution to the question of when to change out the batteries.

Jason

Can you please provide some Input / Guidance from CIW HOUSTON Controls Team

# What is CIW input into testing the AMF Sub Sea on a Well.

What are the chances of not regaining Control after such a test done Sub Sea.

Any knowledge of people doing this test ?

Thanks

Iain Fraser
