Brad

Sounds good, thanks for letting me know.

With all the trouble they are having we need to make sure you get a good wash trip down to the wellhead before the LIT, likely to be debris in the casing and with the AV drop being large where the wellbore goes from casing ID to 18.75" bore it will be important to ensure best chance of good lead impression run.

Merrick,

Just wanted to let you know I arrived on the Horizon. It is looking like we will start our work early Wednesday morning. Shane or I will send a daily report tomorrow morning.

Thanks,

Brad Tippetts
