Subject: Questions

John, any thoughts on these questions? I have to answer these for next week's meeting and I'd appreciate any things you can think of. We can talk in the morning.

Thanks

1) What specific actions are you taking to make each well in your drilling programme better than the last?

- The ops drilling engineer assigned to the rig stays connected during the future well planning process
- As the well is drilled, hole section previews are conducted by the wells and subsurface teams; this is followed by a hole section debrief to capture lessons learned
- Trips to the rig include discussions with the rig based Bp / drilling contractor / 3rd party crews on "operational improvements" and incorporated into the well plan
- The entire E&A engineering team attends the morning call to "listen / advise / learn" for and from the current

2) What is making a difference in your SPU and working well?

- The E & A Drilling / Subsurface / and Tiger Teams are co - located and are truly an integrated well delivery team
