Gregory Luke Meche - MI SWACO

Compliance Spec. 3yr.

Offshore exp. 4 yrs

Monitor retention of base fluid & mud cuttings

14H/1 schedule

Arrived on facility 10:00 - 10:30 day of the incident

Set up equipment couple hours.

Had lunch

duty was to catch sample of fluid during displacement.

Call her to get stroke count (13,000 stks)

Put screen on to monitor measure depth, vertical depth.

Displacement until 9:10 waited for job to begin.

Went outside to gunbo box, (it was loud) there for 20 min. Had 10 min. left to wait. Fluid came back into line. Retrieved sample, conducted test.

Got mud sample in cups to conduct static shear test. Gordon and Blake accompanied him. Vertical test was good.

Returned to shaker house to weigh mud. Went to talk to Gordon for 2 min. to give results. Left, went to living quarters to do paper work for disp. & static shear.

Heard 1st explosion (approx between 9:45-10:00) Approx. 30 sec. between

blast. 1st blast sounded like something was dropped.

Reached other end of blast, in out of office. Alawn sounded out instructions. Ran to ~~Labat~~ room to get live rest then to 1. Labat

Saw Hines coming through derndt. Heard PA "This is
not a drill."
