Subject: Macondo PVC
Importance: High

Steve,

We had a meeting with James Dupree today regarding pressure depletion. The other REs were questioning our PVC being 'low' at 6E-6. Bob Merrill is going to run a case with a higher formation PVC but I didn't want to make one up without consulting you. I was wondering if you could give me an upper range for PVC. We really appreciate it.

Also did you run Macondo through that compressibility calculator that you showed me last Thurs? Curious if I could get a copy of it for my records if so.

THANKS A MILLION!

Kelly
