Subject: Evolution of meeting purpose: suggest we notify call participants

Importance: High

Hi Art,

I have heard through both USGS and DOE channels that the expectation for the outcome of tomorrow's meeting may have changed (perhaps "intensified" is a better word), and that a precise consensus flow rate estimate is now needed by the end of the day. This is an interesting challenge, and somewhat different than what we described during our group call yesterday.

If this is the new goal, I think we should relay this to the USGS participants as soon as possible, so they can start thinking about that as an outcome.

Your thoughts?

Mark

Hi Arthur,

I will be at BP on Friday. May I join you during the flow rate call? If that works, at what office should I join you?
