Collection rates

Q4000

- Measured on two independent flow meters: Rotron and Vx
- The meters were calibrated
- The difference between the two meters (-300 to +500 STB/day)

Helix Producer 1

- Measured using a meter and in the tank
- Meter has 1% uncertainty: ±100 to ±200 STB/day
- Tank measurements are direct and very accurate
- Used meter rates corrected to match tank volumes
- Total uncertainty on collection rates: ±600 STB/day
