Thanks, Rob.

A number of people have been looking at this and we already have had difficult discussions with the USCG on the numbers.

Please tell Alistair not to communicate to anyone on this.

Gary

Subject: Macondo flowing well rate

Importance: High

Someone may have done this already, but Alistair Johnston altered his Macondo well model to approximate open hole flowing conditions, and calculated a rate of 82,000 barrels per day. I'm sure Alistair would be more than willing to share the results and explain the assumptions if interested.

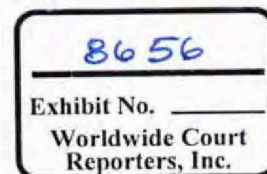

Thanks

Rob Marshall
