It's really sad that they didn't get better recovery of samples!! L This won't give us much to work with.

They do look iffy. Hope we can get them some useful data. One of the news reports I read said that rig was costing them \$500,000 per day and these are all they have to show for it.

As far as I'm aware.

Have you looked at the ct scans? They are really ugly....

Galina,

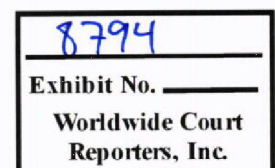

Good afternoon. Please find attached the rotary sidewall sample inventory created today. Please review and let me know if you have any questions.

The samples are moving to CT scanning now. As discussed, we'll take individual sample photos right after that. Unless there is a delay, I'll plan to visit with you and your team on Thursday at 10:30.

Regards,

Jaime
