Attachments: Impact of Capping Stack.docx

Here is a write up on the capping stack pressure change and the resulting change in the flow rate. I tried to do this more slowly than when Art requested it. I have the advantage of more inputs also: I examined the differences one might get if one assumed the flow up the center and the annulus. Only the annulus was assumed in the original calculation and I assumed that the center would be about the same.

Thus, the numbers are slightly different than what Art presented. That may cause some problems. Let me know.

Ron
