Subject: Status BOP's etc.
 Eddy

Triple stack

Assembling Single and Double today
 FSV and Spool pieces are being mobilized from Amelia
 Lift frame being tested today to 225 k lbs and made ready
 HC connector and H4 Connector is available including pancake flanges
 Control System being build by Dean and will all be done at Oceaneering on Friday noon

Challenge right now is apart from assy and pressure test to support the Hub, Flange, FSV assembly on the Trippe as well as taking the load off the bodies from Colflexes. There are no connection or attachment points for any support over the valves (lack of BOP frame).

Remaining milestones

- testing of all connections
- hook up control system and FAT the stack
- mini frames and structure to take loads
- control system completion

Eddy

The Challenge shall be sorted out early this morning (all being equal)
 Provided that we do not have more issues then we will be done with our testing earliest tomorrow 0600 (earliest)

Then skid and connect funnel and as Jess confirms ready to run at 1800 Wednesday.

As a matter of surprise, the rig could not find prof of the rig having tested 1 of their jumper ColFlex hoses. Accordingly we need to change this hose out for a certified hose. DD III is shipping one over to DD II. RMA will make sure a discussion is had with the MSV and team to ensure accountability is addressed.

Hope that clarifies things
