**Importance:** Normal

Ishii,  
The five individuals listed below will be set-up to have access to INSITEanywhere real-time data transmission. The service will be set-up this week. I have the email addresses. Looks as if we'll be drilling the middle of next week.

Bobby

**Subject:** RE: Macondo real-time data access

Bobby,

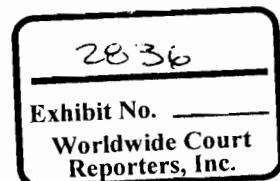

Please arrange that the following five persons at MOEX can access to real-time data transmission. Actually, there is no change from the previous arrangement made when the Marianas rig was being used.

1. Shinjiro Naito
2. Hiroto Kanno
3. Kyoko Yamamoto
4. Yutaka Tsuji
5. Naoki Ishii

Please let me know if you need their email address.

Thanks,  
Ishii

**Subject:** Macondo real-time data access

Ishii,

What individuals will require access to real-time data transmission? A quick update: Currently were on location at Macondo. We have approximately 4 or 5 days of routine BOP maintenance to complete. After the BOP repairs are complete, we'll test the BOP stack on surface, run the riser, latch-up to the wellhead, test the BOP on the wellhead, drill out cement plugs, and resume drilling. Looking like we'll be drilling in approximately 7 days.

Thanks,

***Bobby Bodek***
